

CARTOGRAPHY SERVICES

NF Cubed has extensive knowledge and experience in producing accurate mapping for the energy industry using the latest data available to the market.

We have experience in site selection both in physical site visits for site evaluation, and mapping multiple level designation & policy information to ensure best site selection for planning permissions and licence applications.

NF Cubed are used to working with multiple land agents, councils and authorities ensuring that precise information is available to aid discussion and project progression.

We have produced drawings for over 100 planning applications including EIA drawing packages. These packages have ensured that all the information is correct and present first time, resulting in fewer delays in receiving successful planning consents.

This service also offers technical drawing capabilities and has produced many site layout drawings and site elevation drawings for multiple rigs. The site designs have been worked on with many onshore rig operators to ensure they adhere to industry health & safety standards along with rig company working regulations.

NF Cubed has worked with many consultants over the years making sure the information and drawings needed are supplied by quality specialists where needed. We provide a QA service that overlooks any external production ensuring it meets the requirements.

Many of our clients have used this service to help aid internal discussions on field development, gain successful planning consents and for attracting potential investment.
